

We heard from Andrew Topp – Capital Chemist Group Business Manager on his experience with the Capital Chemist family.

The Capital Chemist Group's involvement in Palliative Care is a unique and admirable part of what we do and how we demonstrate our community involvement and genuine care for the community.

"From personal experience, I know how important it is to have access to a wide range of palliative care medicine towards the end of life, which often allows patients to remain at home with their families. For this reason, I have always sought to work with palliative care teams to ensure that they have access at any hour - this was especially useful in small towns where I previously lived."

It is an absolute privilege to support patients and their families at the most difficult of times. We know and value the importance of implementing professional services to look after our local communities.

The Capital Chemist Group has also been actively involved in the provision of curative Hepatitis C treatments.

"Possibly the most incredible advance in therapy I have witnessed in community pharmacy; previously mostly incurable and a guarantee of lifelong problems, modern anti-viral drugs can now cure Hepatitis C in almost every case. The first time I helped a patient to reach the end of their course there was tears on both sides of the counseling desk!"
